

Stablecoins

Martinet Lee

/Outline

- What is stablecoin?
- Categorizing stablecoins
- USDC
- Maintaining the peg
- Brief intro of MakerDAO & Black Thursday

/What is a stablecoin?

- Assets that are designed to peg to some other assets.
 - Real world asset: USD, Gold, ..
 - Another Cryptocurrency: BTC, ETH, ..

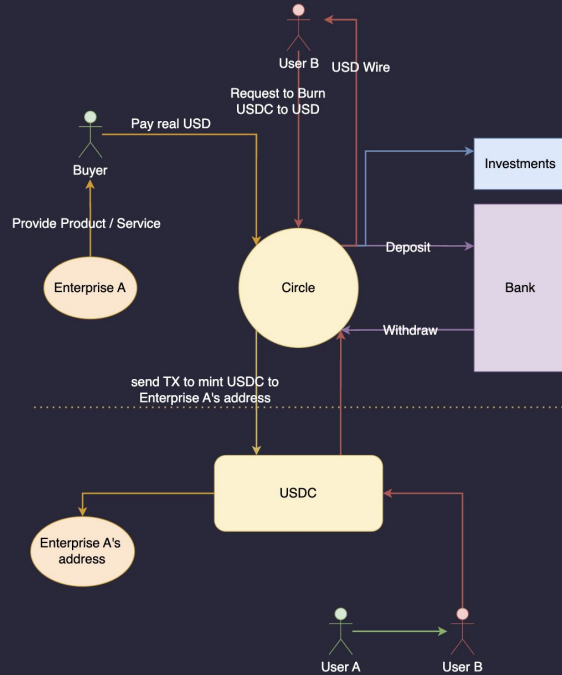

/Categories of stablecoins

- How is it collateralized?
 - Fully collateralized
 - Fractionally collateralized
 - Algorithmic

/Prominent Stablecoins

1. USDT
2. **USDC**
3. Paxos (BUSD, Paxos Gold, ...)
4. **DAI**
5. Frax
6. Liquity
7. Gyro
8. UST (gg)

/USDC

/Peg

- The asset should have the same price as in the original asset.
- “Same price” \Rightarrow in what market?
- What is a market?

/Markets listed on Coingecko

USD Coin Markets

Uniswap

Curve

/Peg

- Peg is maintained by `creating a market`
- `“Arbitrageurs”` will do the rest

/Bankrun scenario in USDC

- Let's say people lost confidence in USDC
- What should people do in this case?

/Bankrun scenario in USDC

- Let's say people lost confidence in USDC
- What should people do in this case?

/Decentralized?

- How is the asset custodied? (if any)
 - USDC, USDT \Rightarrow Centrally custodied
- Is it upgradeable?
- Does it contain blacklist?

/Code tracing

- WBTC
- USDC
- USDT

/MakerDAO's DAI: Collateralized On-chain

- Stablecoin with over collateralized asset on chain.
- Lock asset to mint DAI.
- Burn DAI to release asset.

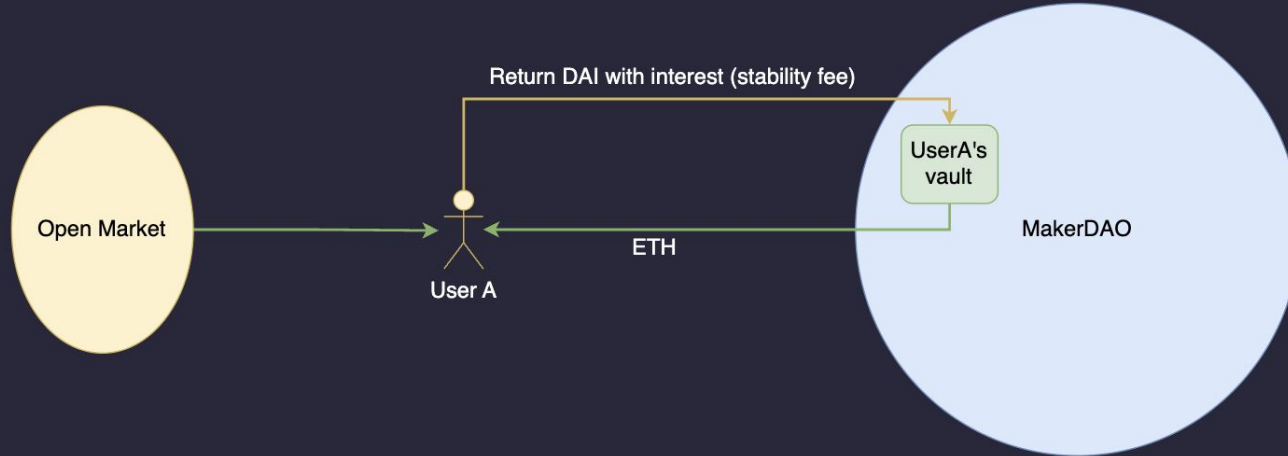

/MakerDAO's DAI: Vault Creator's PoV

- Why?

/MakerDAO's DAI: Vault Creator's PoV

/MakerDAO's DAI: Over Collateralized On-chain

- Stablecoin with over collateralized asset on chain.
- Lock asset to mint DAI.
- Burn DAI to release asset.

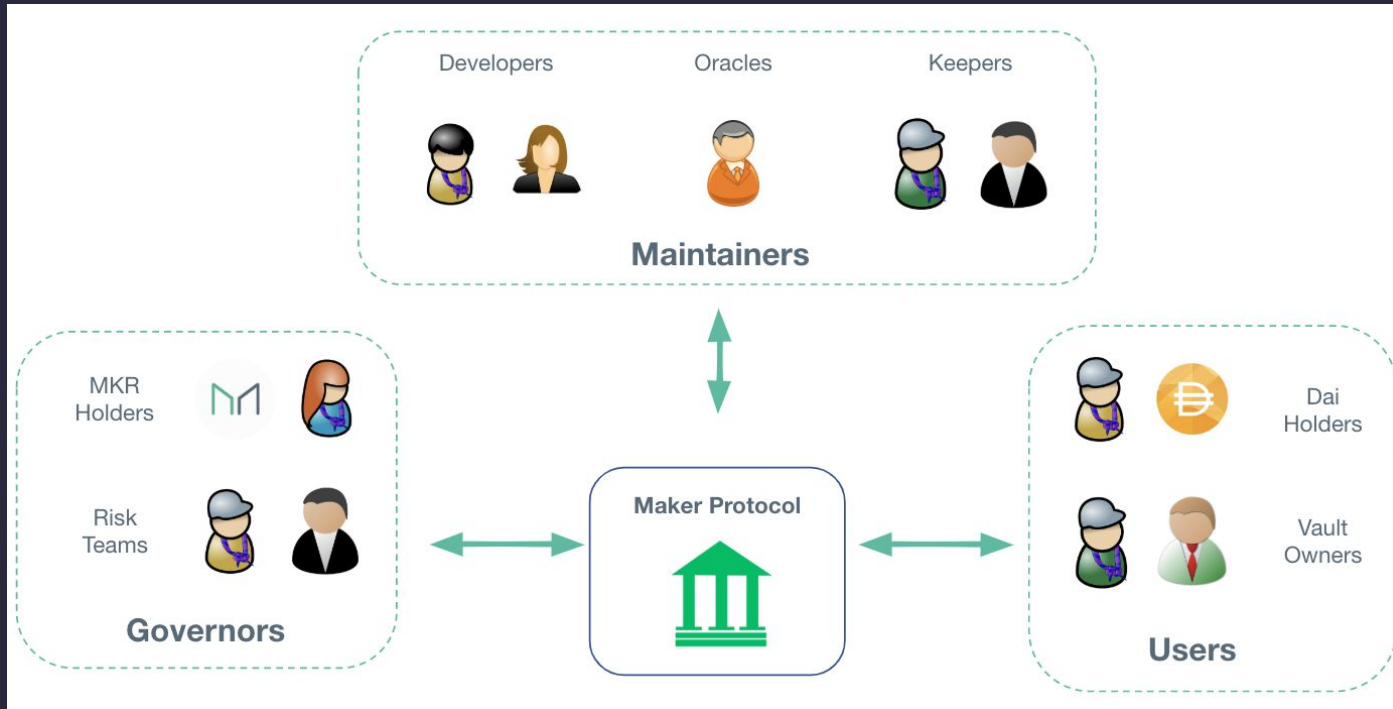

/When Collateral value drops

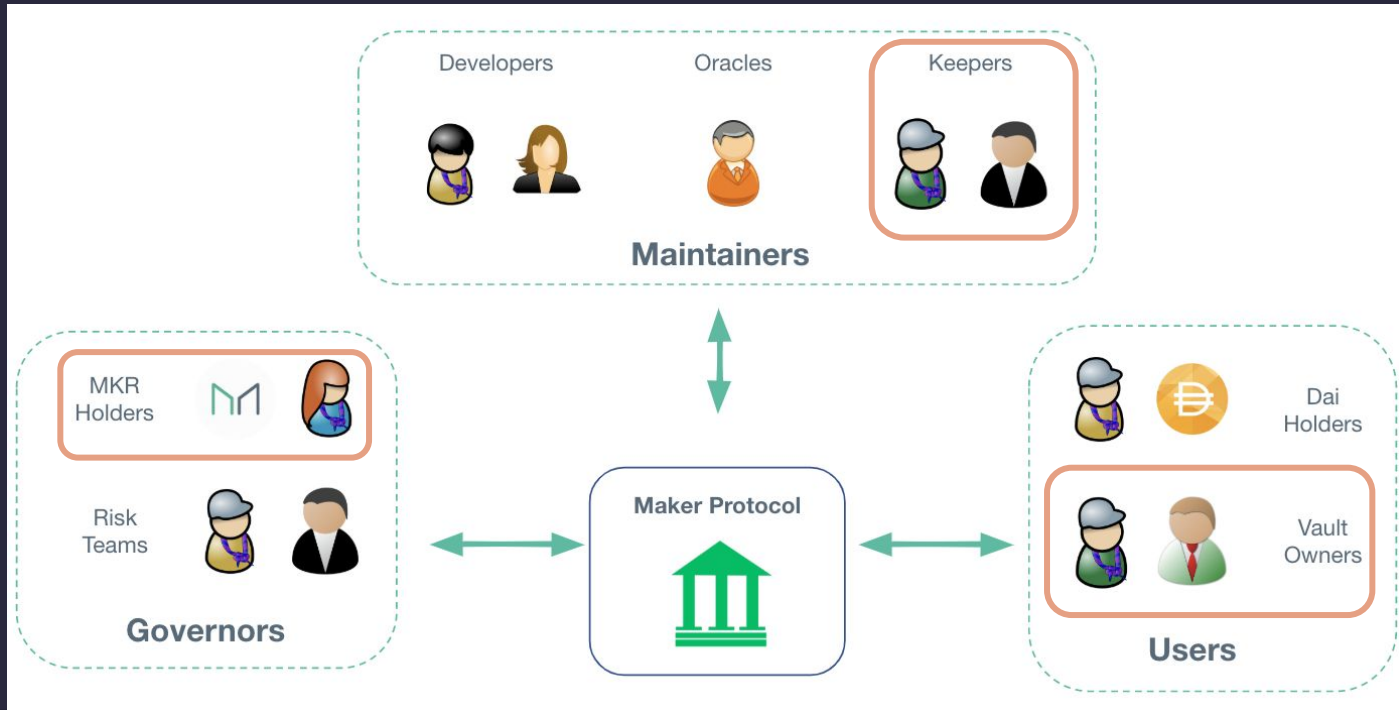

- Vault owner has to return DAI to reduce debt.
- Or add collateral.
- Otherwise some parts will be auctioned.

/Actors in the MakerDAO protocol

/Actors in the MakerDAO protocol

/Important Roles in the Protocol

- Vault owners
 - Who locks up their asset to mint Dai
 - Generally, wants to hold Ether but also wants some cash for leverage.
- Keeper
 - Help maintain the system to be over-collateralized by participating in auctions
- MKR Holder
 - Vote on changes for sensitive parameters.

/Protocol Financial Tools

- Risk Premium Rate
- Base Rate
- $\text{Stability Rate} = \text{Base Rate} + \text{Risk Premium Rate}$
- Dai Savings Rate
- Debt Ceiling
- Liquidation Ratio

/Where does the Rate go?

- Protocol earns them and..?
- Buys MKR token with surplus DAI \Rightarrow MKR price goes up \Rightarrow MKR holders benefits ?

/Defending the peg = Adjusting the Supply/Demand

- If DAI is lower than \$1
 - Need to increase demand
 - Increase Dai Saving Rate
 - Need to reduce supply
 - Increase Stability Rate
- If DAI is higher than \$1
 - Need to increase supply
 - Increase Debt Ceiling
 - Need to reduce demand
 - Decrease Dai Saving Rate

/Code Tracing - Welcome to Daiwanenese..

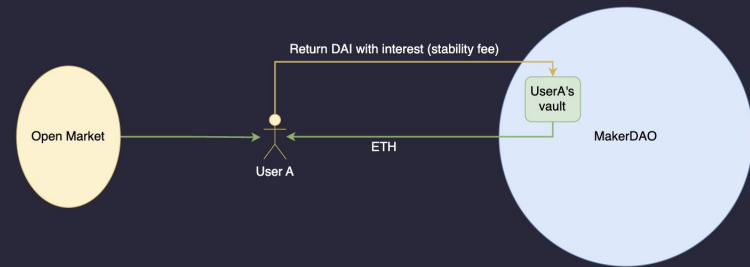

- SavingsDAI module
- Glossary
- Pot Documentation

/Engineering Question

- There are more than thousands of vaults
- With the stability rate, we want to update how many DAIs do users need to return for all vaults
- How should we do it?

/MakerDAO: When does it fail?

- When DAI depegs.
- What does depeg mean in this context?
 - “No one wants DAI” \Rightarrow Who has the absolute need for DAI in this design?

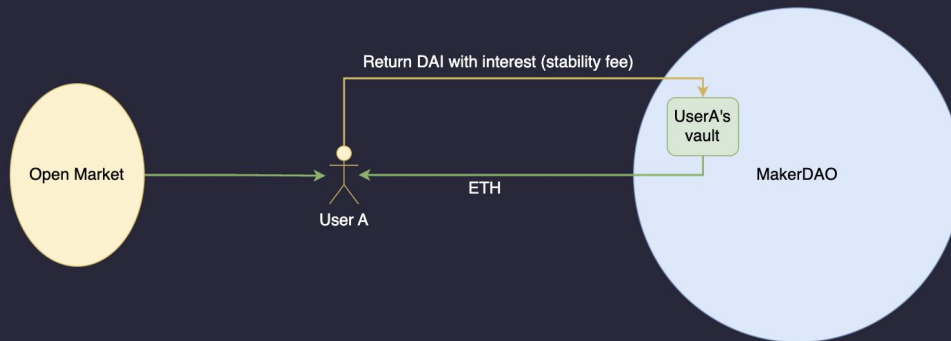

/MakerDAO: When does it fail?

- When the vault owner don't want the DAI, that's when it fails. The DAI is used to release its ETH \Rightarrow The DAI's value is supported by the ETH it locked in the vault.

/MakerDAO: When does it fail?

- If a vault owner needs to pay 1000 USD worth of DAI to recover 900 USD worth of ETH, the rational move is to NOT pay that amount ⇒ **Intrinsic need is gone**

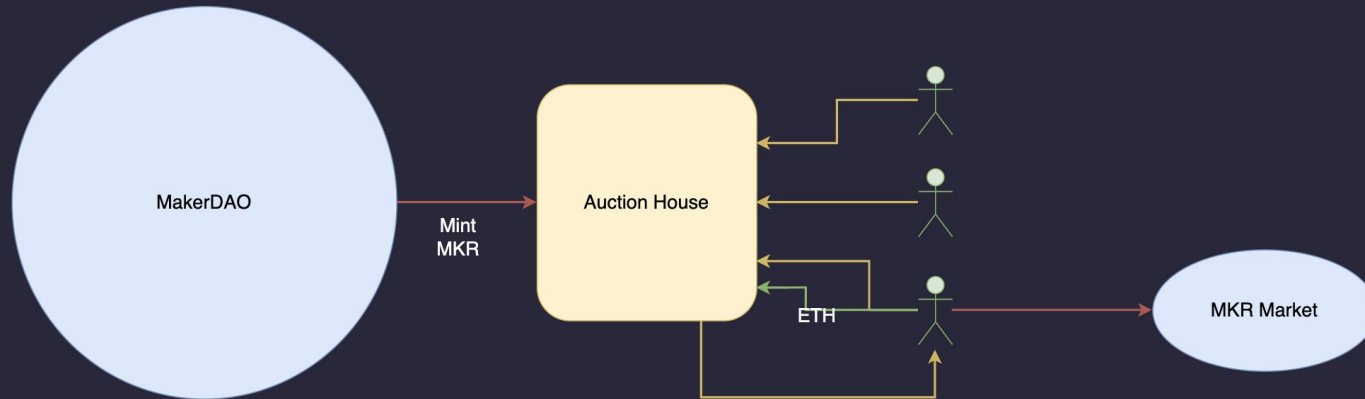

/OK FAILED. Wat do?

- Position is really under water ($\text{Collateral} < \text{Debt}$)
⇒ Bad debt for the protocol
- Protocol is responsible for recovery ⇒ How?

/OK FAILED. Wat do?

- Protocol is responsible for recovery \Rightarrow Mint MKRs and Auction them off
 - Penalizing MKR holders
 - Recovery of the protocol

/MakerDAO Black Thursday 2020

/Gas Price

/Gas Price Effect

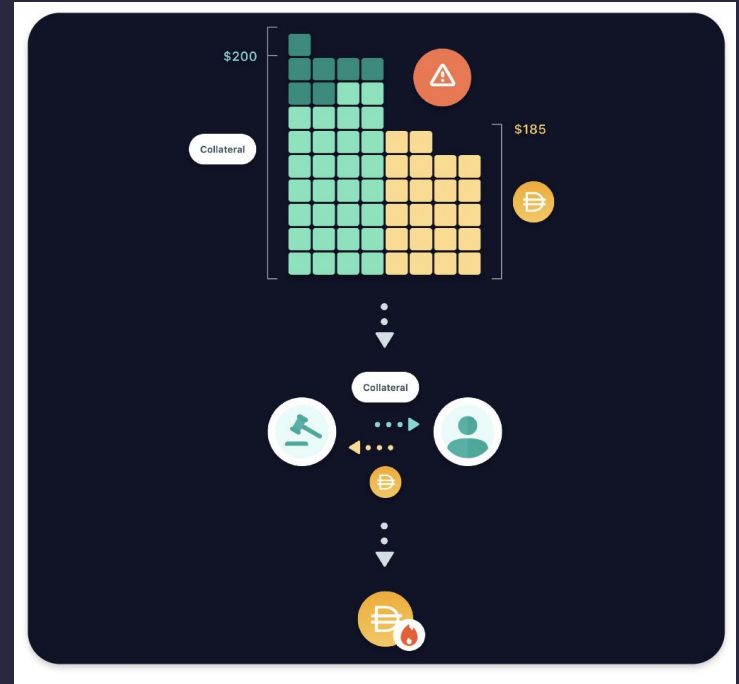

- Vault owner
Cannot [Add collateral or Return Dai] in time (1 hour as per system setting)
→ Triggering A LOT of individual debt auctions (4447 Flip auctions)
- Keeper
(1) Not enough liquidity to participate in all auctions
(2) Tries to gain Dai liquidity from Exchanges -- but gas fee issues, also, a large exchange halted withdrawals due to gas prices

/Gas Price Effect

- Vault owner
Cannot [Add collateral or Return Dai] in time (1 hour as per system setting)
→ Triggering A LOT of individual debt auctions (4447 Flip auctions)
- Keeper
(1) Not enough liquidity to participate in all auctions
(2) Tries to gain Dai liquidity from Exchanges -- but gas fee issues, also, a large exchange halted withdrawals due to gas prices

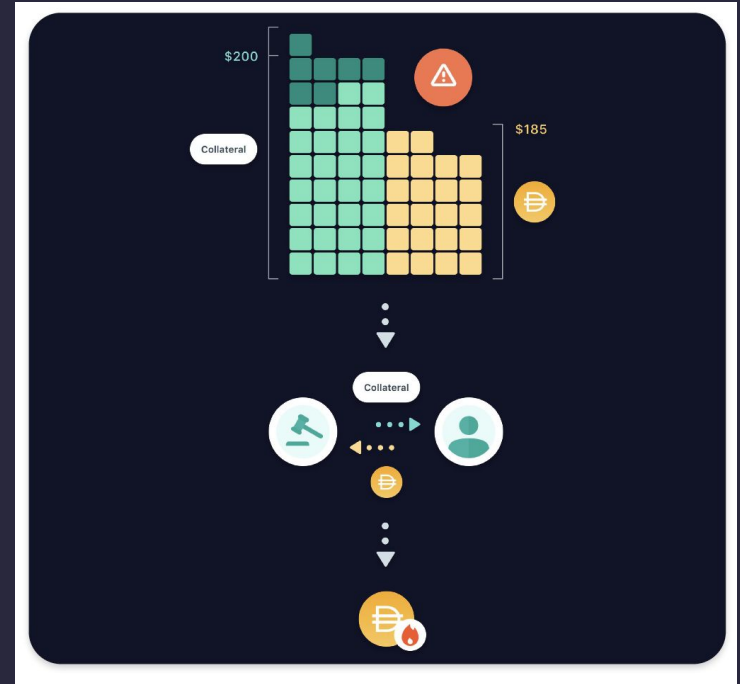

/Gas Price Effect

- Auction implementation detail matters.

/Gas Price Effect

- Auction implementation detail matters.
- Free Ethers for Keepers, reducing the asset that the system has without burning any Dai.
- System debt: 5M+ Dai

/Governance change

- Flip auction TTL: 10 minutes \Rightarrow 6 hours
- Flip auction lot size: 50 ETH \Rightarrow 500 ETH
 - Decreasing number of auctions
 - Significantly increase entry barrier
- Flip auction maximum duration: 3 days \Rightarrow 1 day
- Flop auction TTL: 10 minutes \Rightarrow 6 hours

/More stable(?)coins

- Fractionally collateralized
 - Frax
- Algorithmic coins
 - Ampleforth

/Final Project Discussion

- ETHTaipei
 - Hackathon reminder & Conference participation
- Midterm proposal format
 - 1-2 page pdf
 - Content
 - 3 Ideas
 - Reference readings for the ideas
 - Related background
 - Competition / Current solutions
- Ideas
 - ETHTaipei Hackathon bounties
 - Deploying an existing project?
- Scoring part

/THAT'S A WRAP! (mic drop)
